

TRY THE STATIC KILLER

Destructive particles sticking to film, lenses and other surfaces have already made static your problem partner.

Try Zerostat, the static killer—a unique piezo gun which actually neutralizes BOTH positive and negative charges (with ionized air coronae rather than with potentially dangerous radioactive emissions). And Zerostat can literally spray down an area from a working distance of 12 inches. The Zerostat instrument is \$29.95. For this, you get to kill static from a reasonable distance—safely and without

cartridge replacement or the need to plug anything in the wall. A special industrial version is available for \$80.00 which includes metal storage case. Send \$29.95 for each standard Zerostat and/or \$80.00 for each industrial Zerostat. Clearly include name, address and zip for shipping.
